Role of Harbor Offshore, Inc.:

Technical Support during Engineering,
Technical Support and Provide Technicians,
personnel, navigation and cable equipment
during Installation of cables and subsea
arrays

Date started:

May 2007

Date completed:

September 2007

General scope of the project:

Harbor Offshore provided highly valuable technical support during planning and execution of this project. Personnel with Harbor Offshore participated in the mobilization of equipment and the on-water installation. SAIC personnel installed the array and Harbor Offshore installed the umbilical's and shore cables. Harbor Offshore provided the key members of the submarine cable team, during all phases of the installation.

The nature of the work that was performed:

Install (2) shore connections consisting of a 1645 foot umbilical, 10,000 lb clump weight in 1400 feet of water and a 30,000 foot power and data cable to shore on Back Island.
